

PEST ANALYSIS

Political Factors

Opportunities

- Strong policy focus on rural livelihoods, sustainability, and women-led development programs.
- Mandatory CSR provisions under the Indian Companies Act create steady funding opportunities for impact-driven projects.

Challenges

- Delays in local approvals related to land use, farming permissions, or export documentation.
- Changes in agricultural or export policies may influence long-term operations.

--

Economic Factors

Opportunities

- Rising international demand for ethically and sustainably produced floriculture products.
- Scope to diversify income through allied avenues such as eco-tourism, organic certification premiums, and carbon offset initiatives.

Challenges

- Volatile logistics, compliance, and transportation costs.
- Seasonal fluctuations in flower production affecting revenue predictability.

--

Social Factors

Opportunities

- Significant scope for women's employment and leadership in rural communities.
- High visibility and goodwill for corporate partners through socially responsible branding.

Challenges

- Hesitation or resistance among traditional farmers toward new cultivation models.
- Differences in literacy levels and digital familiarity that may slow adoption of QR systems.

--

Technological Factors

Opportunities

- Digital traceability through QR codes enhances transparency and trust for CSR partners.
- Increased access to smartphones enables smoother rural technology adoption.

Challenges

- Infrastructure gaps such as internet connectivity and technical training needs.
- Ensuring data security and system maintenance in remote environments.

5E + 1H FRAMEWORK

Who

- Women in rural Anekal seeking consistent income opportunities
- Farming communities with unused or underutilized land
- Corporates allocating CSR funds but lacking visibility into real-world impact

What

- Limited livelihood options for rural women
- Inefficient utilization of available agricultural land
- Lack of accountable and traceable CSR sustainability models

Where

- Villages in and around Anekal, Karnataka
- Corporate–community engagement ecosystems

Why

- Absence of organized market access and structured livelihood programs
- Weak monitoring mechanisms in CSR-funded initiatives
- Disconnect between corporate sustainability goals and grassroots execution

When

- A persistent issue that is intensifying with stricter ESG and CSR expectations
- Especially urgent due to growing demand for measurable and transparent impact

How

- Through a community-driven floriculture model enabled by QR-based monitoring
- By training and employing local women for on-ground supervision
- By enabling corporates to sponsor, track, and report tangible impact outcomes

PROBLEM OVERVIEW

Rural areas such as Anekal face persistent challenges including limited livelihood options for women, underused agricultural resources, and poor accountability in CSR-funded environmental projects. Simultaneously, corporate organizations struggle to convert sustainability commitments into initiatives that are transparent, measurable, and community-oriented.

PROJECT: GO GREEN ANEKAL

Final Problem Statement

Rural regions like Anekal lack structured livelihood opportunities for women, efficient use of agricultural land, and transparent monitoring in CSR-led environmental initiatives. At the same time, corporate entities face challenges in achieving verifiable and community-integrated sustainability outcomes through their CSR investments.

Solution Overview

Go Green Anekal collaborates with corporates, institutions, and organizations to implement CSR-funded sustainability initiatives centered on floriculture. Corporate employees participate by sponsoring flower cultivation plots in selected villages. Local women monitor these plots using a QR-enabled tracking system. The harvested flowers are then consolidated and exported, generating environmental benefits, rural employment, and measurable economic value.

CORE FEATURES (MVP)

- CSR-Based Corporate Sponsorship Model
 - Employee Engagement & Participation Program
 - QR-Enabled Tracking and Traceability System
 - Women-Led Field Monitoring Network
 - Impact Analytics and Reporting Dashboard
 - Centralized Flower Collection and Export Operations
 - CSR Compliance and Documentation Support
