

SDGs Addressed by Go Green Anekal

Go Green Anekal collaborates with corporates, institutions, and organizations to implement CSR-funded sustainability initiatives centered on floriculture. Corporate employees participate by sponsoring flower cultivation plots in selected villages. Local women monitor these plots using a QR-enabled tracking system. The harvested flowers are then consolidated and exported, generating environmental benefits, rural employment, and measurable economic value. how many sdgs does this solve

SDG 1 – No Poverty

How it is solved

- Sponsored flower plots generate predictable income for rural households
- Export-linked pricing ensures higher earnings than local markets
- Reduces dependence on seasonal or informal labor

Impact type: Direct

SDG 5 – Gender Equality

How it is solved

- Local women are trained and paid as plot monitors
- Digital participation via QR-based tracking builds technical confidence
- Moves women into supervisory and data-linked roles, not just labor

Impact type: Direct

SDG 8 – Decent Work & Economic Growth

How it is solved

- Formalizes rural employment in floriculture
- Links villages to global value chains (exports)
- Encourages skill development in agri-tech, quality control, and logistics

Impact type: Direct

SDG 9 – Industry, Innovation & Infrastructure

How it is solved

- QR-enabled monitoring system introduces digital agri-infrastructure

- Traceability improves transparency for corporate sponsors
- Builds a scalable CSR-tech-agriculture model

Impact type: Direct

SDG 12 – Responsible Consumption & Production

How it is solved

- Controlled cultivation reduces waste and chemical overuse
- Traceable plots enable accountability in production
- Export-grade efficiency improves resource utilization

Impact type: Direct

SDG 13 – Climate Action

How it is solved

- Floriculture increases green cover
- Polyhouse cultivation improves water efficiency
- Reduced land degradation compared to traditional farming

Impact type: Indirect but measurable

SDG 15 – Life on Land

How it is solved

- Sustainable land use through protected cultivation
- Prevents soil exhaustion common in mono-cropping
- Promotes biodiversity-friendly farming practices

Impact type: Indirect

SDG 17 – Partnerships for the Goals

How it is solved

- Corporates fund CSR initiatives
- Communities implement and maintain projects
- Export buyers complete the value chain

Impact type: Structural / Enabling
